Versatility

- 80+ tips available for over 18 different applications...all with the same handpiece!

Ergonomic

- Simple and precise control
- Silent pump with a very constant flow rate ensuring a controlled spray
- Internal transformer to save space and increase security

P5 NEWTRON LED XS

Consider the benefits

- Linear tip vibration provides more comfort for your patients
- Vibration-free handpiece provides increased tactile sensation
- No heat build-up in handpiece means less water required and your patients stay dryer
- Smoother tooth surface post-treatment means better clinical results
- Cruise Control System™ provides maximum performance, more power and control for a variety of applications

The heart of every unit

- The NEWTRON™ control module utilizes the most advanced electronic components and over thirty years of Piezo Ultrasonic experience to provide you with the satisfaction that only SATELEC® can offer
- The NEWTRON™ is also available as a built-in (The SP NEWTRON™ & SP NEWTRON LED™)

Also Available...

- NEWTRON™ technology
- Color Coding System CCS™
- The unit that started the revolution...

- NEWTRON™ LED technology on the world's best-selling ultrasonic device by SATELEC®
- Color Coding System CCS™

- Self contained irrigation for greater portability
- NEWTRON™ technology
- Color Coding System CCS™

* Magnetostrictive ultrasonic (Metal Stacks)

Color Coding System™

Green Code : Low
- For delicate treatments such as Periodontics.

Yellow Code : Medium
- Suited for Endodontics and Surgery.

Blue Code : High
- For a sustained effort like scaling.

Orange Code : Very High
- For loosening posts and crowns.

A colored band at the base of the tip helps you choose the proper power setting for your SATELEC® tips and Piezo Ultrasonic units, and guarantees you the best performance. We call it our Color Coding System™!

Autoclavable LED Lighted handpiece 100,000 LUX

- The first Autoclavable LED handpiece!
- Excellent visibility even in posterior areas
- Cold light (6,000° - 7,000° K) for better tissue recognition
- Ideal for working with loupes
- Powerful, very long-lasting LED
- Handpiece can be autoclaved at 134° C

"The P5 Newtron XS LED just flat out rocks! No matter what we do with it, it performs well and exceeds my expectations. Not only is it a valuable piezoelectric scaler that my hygienists use for calculus removal and periodontal procedures, but it is an invaluable device for endodontic procedures such as retreatments and passive ultrasonic canal irrigation. I even use specialized tips from ACTEON with P5 XS LED for perfect margin preparation and effective caries removal. Due to its versatility, I really think more doctors should be looking at it as an adjunct to lots of their procedures."

"ACTEON's P5 Newtron XS™ offers easy portability, complementing its light weight and compact design. The 300ml irrigation tank allows use of water or chlorhexidine. This is a great feature for practices where space is an issue, where the unit will be shared between operatories, or if there are no quick water connections available. It is also ideal for hygienists that are employed as subcontractors or temps, traveling to multiple practices. Also, the available autoclavable LED lights in the handpiece provide a bright, white light for superior visibility when working with loupes."
