

SOPROLIFE

Light Induced Fluorescence Evaluator

It's an Intra Oral Camera!

Daylight Mode

As an intra oral camera SOPROLIFE provides clear and crisp images in each of its three preset positions:

- Macro 0-5 mm
- Intra Oral 5-30 mm
- Portrait 30 mm - ∞

It's a Caries Detection Device!

Diagnosis Mode

SOPROLIFE provides better detection of decay than any other available device.

Treatment Mode

Images produced in the treatment mode show a differentiation of healthy tissue vs diseased tissue.

Diagnosis Mode

SOPROLIFE offers greater accuracy in identifying the development of occlusal and/or proximal carious lesions. This mode potentially speeds up the decision making process in treatment planning and enables safer options for the patients by possibly reducing the number of x-rays.

Treatment Mode

Clinical performance is enhanced as SOPROLIFE enables you to visually differentiate between healthy and affected tissue in the excavated site. Treatment Mode provides the clinician complete confidence in the removal of only the affected tissues, thus preserving as much healthy tooth structure as possible.

Daylight Mode

In white light, from Portrait to Macro, SOPROLIFE produces unequalled quality of image. This mode not only enables you to communicate more effectively with your patients, but also gives you the ability to see details invisible to the naked eye.

What they're saying...

Paul Feuerstein, DMD
North Billerica, MA - Private Practice
2010 Yankee Dental Congress "Clinician of the Year"
Adjunct Asst Professor Tufts University of Dental Medicine

"The SOPROLIFE has literally changed the way I do operative dentistry and case presentations. The images pre-op and during the procedures have helped me professionally in recognizing areas of decay that I might have otherwise missed. It also gives the patients a sense of total confidence in the thoroughness of my "work" as well as the use of the latest technology for their care."

Martin Jablow DMD
Woodbridge, NJ - Private Practice
Writer and international Lecturer

"The SOPROLIFE combines an intra oral camera providing exceptional detail with caries detection into one device making caries detection easier. Additionally, SOPROLIFE enhances my skills as a dentist by enabling me to detect caries earlier and more conservatively remove decay. SOPROLIFE is a valuable tool to examine teeth for caries and fractures more thoroughly."
