**PRESS RELEASE:**

**ACTEON North America releases new Crest Splitting Kit for the Piezotome 2**

ACTEON North America (Mt Laurel, NJ) has introduced a new set of ultrasonic tips for the **Piezotome 2** and **Implant Center 2 LED** devices for piezoelectric bone surgery. The **Crest Splitting Kit** includes six tips that can be used with a specific protocol to allow clinicians to perform safe, effective ridge splitting during pre-implant bone surgery. The ultrasonic frequency of **Piezotome** makes the instruments active only on bone so there is reduced risk of damaging delicate structures such as gingiva and nerves. These uniquely designed tips are the first of their kind and can only be powered by **Piezotome 2** technology exclusively from **ACTEON**. Please contact your local dealer or **ACTEON** for more information.
