PRESS RELEASE:

ACTEON, North America Donates P5 Newtron XS devices to Medical University of South Carolina (MUSC) College of Dental Medicine

Acteon, Inc has partnered with the College of Dental medicine at MUSC to assist the new post graduate endodontic program by donating six P5 Newtron XS LED piezoelectric ultrasonic devices. These devices will allow the residents to learn on some of the best equipment available for procedures such as endodontic retreatments, apical surgery, and passive ultrasonic irrigation. Please see the quote below from the Director of Post Graduate Endodontics, Marc Levitan, DDS:

"Funding for dental postgraduate education is scarce so dental schools are working more closely with manufacturers to assist in resident training. As director of a new program, the issue of how to provide our endodontic residents with the best technological products available was answered by Acteon. The personnel at Acteon listened and donated what most consider to be the ultimate in ultrasonic delivery systems - the P5 XS Satelec device - for each resident. The confidence of knowing that residents and patients alike are exposed to the best in dental equipment allows for more predictable endodontic outcomes. Thank you, Acteon. The rest is up to us."
